

To whom it may concern

### Announcement

Jevicko, 15th May 2021

Dear customers,

Starting from 1 July 2021, we will supply our rescue parachutes ATL-15 SL with minor modifications aimed at **improving the user properties of the rescue parachute**. At first glance, the modifications are not obvious to the average user. The technical parameters of the rescue parachute were preserved.

The improvements are the following:

1. For the VL-037 lifting rope, the microline cord with sewn-on needles was replaced with a steel cable with pressed-in needles (pins). We have thus achieved higher accuracy during production, and we have also eliminated possible inaccuracy when packing the parachute (turning the needle).
2. In connection with the previous modification, we also shaped the plastic reinforcement of the inner flap and modified the upper flap of the OP-094 parachute cover. We have thus ensured better storage of the needles (pins) of the release and the cable in the shaping. At the same time, we also achieved a more compact appearance of the packed parachute.

We firmly believe that you will appreciate these product improvements during their further use in the long term.

All the ATL-15 SL rescue parachutes with a delivery date after 1 July 2021 will already contain the above-described modifications. The prices of the rescue parachutes will not be affected.

Thank you for your support. We truly appreciate your business and look forward to serving you again.

Kind regards

MarS a.s.
